

# 3 WAYS TO NAVIGATE A HYBRID WORKPLACE

## INDUSTRY FACT

UK ORGANISATIONS EXPERIENCED AN AVERAGE OF 788 WEEKLY CYBER ATTACKS ACROSS 2022, MARKING A 77% INCREASE FROM 2021.

ITPro

Hybrid work is altering the business world. With its increasing prominence and prevalence, Iron Mountain conducted a survey of small business owners to find out whether, and how, their information management practices have changed.

### Out of the 40% of businesses that adopted a hybrid work model:

- 64% moved to cloud-based platforms.
- 44% developed a better understanding of their data.
- 25% acknowledged the importance of staying on top of information security.

By understanding how other businesses continue embracing hybrid models, consider how you can bring the same practices to your organisation. Following are three tips that will help you get started.

- **Look to the cloud.** In today's hybrid environment, employees need to easily access documents regardless of their working location. Evaluate your paper-based records to determine what can be moved to the cloud. When undertaking the process, familiarise yourself with retention and compliance guidelines.

- **Regulate data by centralising key information.** Disparate data is chaotic and can put your organisation at risk of compliance and litigation issues. Consider consolidating your data by creating a centralised repository, which enables your approved employees to easily access, collaborate and analyse data when needed.

- **Control information security by implementing proactive strategies.** With the move to hybrid work, the threat of falling prey to cybercriminals is rising. Get ahead of cybercriminals by evaluating your security practices and assess (and limit) employee access to sensitive information. Then, implement proactive strategies to spot and avoid cyberthreats, including ensuring all systems are up to date and training employees to spot common scams.

### Hybrid is here to stay so ensure your business is keeping up

By adapting the aforementioned information management best practices, including moving data to the cloud, centralising information and shoring up your defenses by training employees on cybersecurity, you, too, can embrace a hybrid environment - something today's employees crave.
